

UNIT 11: Back-Up Procedure

The artefact for this unit was to evaluate the Grandfather-Father-Son (GFS) backup procedure, and to compare this disaster recovery system to other methods of backing up data.

We discovered that it involves creating multiple generations of backup's ie daily, weekly and monthly backups. GFS policies are useful in retaining backups for a long period of time in a more storage-efficient manner (Microsoft, 2024).
